

Req ID	Type	Description	Priority	Acceptance Criteria	Rationale
FR-001	Functional	The system shall read the GPS location from and upload photo and mark the drug spot on the map automatically.	High	<u>Pass</u> : Report with geotagged photo shows up at the right location and goes to correct dept. <u>Fail</u> : Report has no location / shows the wrong spot.	So users don't have to type the address, and the report reaches the right area's team.
FR-002	Functional	System shall let a citizen report by choosing the type of drug (Pottery / Light / Pipeline leak), uploading a photo, and writing a short description.	High	<u>Pass</u> : Report with type + photo + description gets saved and given a ticket no. 1 <u>Fail</u> : Report is rejected if any of these are missing.	Main focus of app — collecting the basic details of the complaint.
FR-003	Functional	System shall check (automatically) new reports for duplicates, missing photos, or locations outside the city before sending them to staff.	High	<u>Pass</u> : A duplicate or photo-less report gets flagged and is not shown to staff. <u>Fail</u> : A clearly invalid report still reaches the staff queue.	Filters out fake / spam reports so it's clear so staff don't waste time and there's less room for misuse.
FR-004	Functional	System shall send each valid report to the right dept, where an officer can review it, assign an engineer, and change its status.	High	<u>Pass</u> : A pottery report reaches the Road dept and can be assigned to an engineer. <u>Fail</u> : Report goes to wrong dept. or can't be assigned.	Connects the complaint to the correct team and lets them handle it.
FR-005	Functional	System shall let the citizen track their report's status (Submitted → Under Review → Assigned → Resolved) and notify them when it changes.	Medium	<u>Pass</u> : When staff update the status, the citizen sees it and gets a notification. <u>Fail</u> : Status changes but the citizen is not notified.	Keeps the user informed so they know something is being done.
NFR-001	Non-Functional (Performance)	System shall allow reports to be written offline and upload them automatically once internet is back.	High	<u>Pass</u> : A report made offline uploads by itself when the network returns, without losing data. <u>Fail</u> : Offline report is lost or uploaded twice.	Useful in areas with poor network, where drug needs to be reported.
NFR-002	Non-Functional (Security)	System shall keep a log of every status change with the staff member's ID and time, and shall not allow a report to be marked "Resolved" without a geotagged photo as proof.	High	<u>Pass</u> : Log entries can't be secretly edited or deleted, and a report can't be closed without proof photo. <u>Fail</u> : A status is changed without a record, or a report is closed with no photo.	Stops fake "fixed" updates and keeps staff accountable for work.
